2. Executive summary

This chartering report defines the methodology used for the creation of the working groups, as well as the criteria established regarding internal clauses and performance evaluation.

The formation of the teams was carried out by maintaining groups from other courses, based on the strong performance achieved in previous projects. Additionally, the document outlines the working agreement among the members and the key indicators used to measure the project's performance.

Overall, reward systems in case of good performance are established, as well as disciplinary measures, which may include warnings or expulsion from the group in cases of non-compliance.

3. Revision Table

Revision number	Date	Description	Contributor
1	09/02/2026	Essential information	All students
2	01/03/2026	English translation and KPIs redefinition	Student 1

4. Introduction

We will mainly discuss the formation of our group, a working agreement in which we all commit to collaborating effectively as a team, the metric we will use to determine whether a team member has participated appropriately or inadequately and the corresponding consequences, and finally how we will determine the possibility of dismissing one of the project members.

5. Contents

5.1. Recruitment summary

The working group is made up of students who have previously collaborated on other academic projects. Through past experiences, we have managed to establish effective communication, a clear division of responsibilities, and a high level of trust.

As a result, the group has strong working chemistry, which facilitates coordination, problem-solving, and compliance with established deadlines and quality standards.

5.2. Working together statement

After reading and discussing the course syllabus, including the achievement of objectives, workload, and grading and assessment procedures, all group members have reached a formal commitment to carry out the Project collaboratively.

We jointly commit to fulfilling the assigned tasks responsibly, maintaining clear and respectful communication, and complying with the established deadlines and quality standards.

5.3. Performance indicators

To verify whether a team member has worked adequately, we will use the following KPIs for all deliverables:

- *Task Completion Rate (TCR)*: Percentage of main tasks completed by a team member within the assigned timeframe for each deliverable. To be considered a good performance, the rate per deliverable must be at least 90%. At the start of each deliverable period, all main tasks assigned to each student are declared in the planning report. During a bi-weekly review, the number of completed tasks is compared to the total assigned.
- *On-Time Delivery Rate (OTDR)*: Percentage of tasks submitted on or before the planned due date. For each weekly follow-up, scheduled every Monday at 8:30, the tasks planned to be completed for that specific follow-up will be considered for this rate. To be considered a good performance, the rate per follow-up must be at least 90%.

5.4. Reward statements

In the event that any team member achieves exceptionally high KPI values (over 95%) in a review, a 10% tolerance will be granted for each subsequent review. This means that in future follow-ups, KPI values can drop by up to 10% below the original target threshold without affecting the member's reward eligibility.

5.5. Admonished statements

If a team member fails to meet the KPI thresholds in any review, an admonishment will be issued according to a yellow card and red card system: a yellow card will be issued when one or both KPIs fall below the target thresholds for the first time in any review. The purpose of the yellow card is to alert the member and provide an opportunity to improve their

performance before the next review. A red card will be issued if a member again fails to meet the KPI thresholds after a yellow card. A red card indicates a serious underperformance and triggers evaluation for potential removal from the group.

5.6. Fire statements

We have decided that upon receiving a yellow card and subsequently a red card, the team member will be expelled, as their level of collaboration is not considered adequate for the development of the project.

6. Conclusions

Overall, this group was formed based on prior experience in other projects, and we are committed to working effectively as a team to achieve the desired grade.

To evaluate whether individual work has been performed adequately, we will conduct a weekly review to verify if all tasks assigned by the manager have been completed. Work will be considered poor if any tasks are missing, resulting in a yellow card the first time and a red card the second time, which will lead to the dismissal of the team member. Work will be considered good if all assigned tasks are completed, with a variable incentive offered if the member has performed even better than expected.

7. Bibliography

Intentionally blank.
